## DETAILED ACTION

Claims 1-34 are pending in this Action.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-13, 16-19 and 21-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gaynor et al (US 5,904,924). The claims are directed to a dietary supplement comprising a grape skin extract and a grape seed extract.

Gaynor discloses a nutritional powder comprised of a grape seed extract and a grape skin extract. The grape seed extract is standardized to 95% polyphenols. While the reference does not expressly teach applicant's claimed ratio, differences in concentration will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration is critical. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. *In re Aller*, 220 F.2d 454, 105 USPQ 233, 235 (CCPA 1955).

The food supplement of the referenced invention further contains blue-green algae, which is a source of quercitin, Japanese Green Tea, standardized to 7.5% catechins predominantly as epigallocatechin gallate, bilberry, standardized to 25% anthocyanocides and ginkgo biloba, standardized to 24% ginkgo flavoglycosides (column 4).

One of ordinary skill in the art at the time of the invention would have been motivated to modify the teachings of Gaynor with the expectation that the components of the referenced composition have been conventionally employed for

their known functions or nutritional benefit, such as antioxidant and anti-tumor activity.

Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Perkes (WO 99/07400).

The disclosed invention provides a dietary supplement comprising an enzyme that is effective for inhibiting in vivo platelet activity and LDL cholesterol oxidation in a mammal at a dosage of about 30 mg/kg or less. The supplement may contain grape seed extracts, grape skin extracts, bilberry extracts, ginkgo biloba extracts or quercetin. The supplement may also contain fungal proteases, acid stable proteases and bromelain (Abstract).

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Perkes (WO 99/07400). The disclosed invention provides a dietary supplement comprising an enzyme that is effective for inhibiting in vivo platelet activity and LDL cholesterol

oxidation in a mammal at a dosage of about 30 mg/kg or less. The supplement may contain grape seed extracts, grape skin extracts, bilberry extracts, ginkgo biloba extracts or quercetin. The supplement may also contain fungal proteases, acid stable proteases and bromelain (Abstract). Perkes teaches every aspect of applicant's claimed invention. Thus, Perkes anticipates claims 1-34.

### *Conclusion*

No claims are allowed at this time.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charesse L. Evans whose telephone number is 703-308-6400. The examiner can normally be reached on Monday -Thursday 7:00a - 4:30p; Alternating Fridays 7:00a - 3:30p.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman K. Page can be reached on 703-308-2927. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-4556 for regular communications and 703-308-4556 for After Final communications.
